Summary

Aspiring AI Engineer and recent BSc graduate in Computer Science and Engineering with hands-on experience in **machine learning, deep learning, and generative AI**. Conducted research and development on applied AI systems, resulting in a **published conference paper at the 28th ICCIT and an accepted paper at IEEE i-COSTE 2025**. Built several AI-driven systems, including a RAG-based browser extension. Strong programming fundamentals and a strong drive to solve real-world problems through scalable AI solutions.

Skills

Languages & Frameworks: C, C++, Python, FastAPI, FastMCP, LangChain, LangGraph, Tensorflow, Keras, SQL

Technologies & Tools: Ollama, FastMCP cloud, RAG, LLM, NLP, Chroma, Docker, GitHub, Kaggle, HuggingFace

Projects

ChatTube (2025) Developed a browser extension that allows users to chat with an AI about the YouTube video they're currently watching. Tech stack: Python, FastAPI, LangChain, Chroma, SQLite, HuggingFace, JavaScript, HTML, CSS.

Road Damage Classification in Bangladesh using Deep Learning Models (2025) Developed a YOLOv11-based model for classifying road damage using a custom dataset. A research paper based on this work has been published at the 28th ICCIT.

EfficientNetV2S with End Ensemble for Robust Bangla Handwritten Character Recognition (2025) Developed a high-accuracy classification model using EfficientNetV2S with a custom head. A research paper based on this work was accepted for presentation and publication at IEEE i-COSTE 2025.

expense-tracking-mcp-server (2025) Developed a local MCP sever to track user's daily expense. The MCP sever has four core tools and one resource. Tech Stack: Python, FastMCP, SQLite.

ChoritroAI (2025) Developed a Bangla letter practice application powered by a custom deep-learning model proposed in our accepted conference paper. Tech stack: Python, FastAPI, JavaScript, HTML, CSS.

Sudoko-2023 (2023) Developed a simple Sudoku game using C++ and GTK3.

Education

Bangladesh University of Business and Technology

January 2022 – December 2025

BSc in Computer Science and Engineering

Coursework: Machine Learning, Neural Networks, Pattern Recognition, Artificial Intelligence, Data Mining, Knowledge Engineering, Algorithms & Data Structures, Object-Oriented Programming, Advanced Programming, Software Engineering, Operating Systems, Computer Networks, Distributed Databases, Statistics, Numerical Analysis, Microprocessor & Microcontroller, Internet of Things.

Extracurricular

- Participant, ICPC Regional Contest 2023.
- Co-Author of a published IEEE conference paper titled "Road Damage Classification in Bangladesh using Deep Learning Models".
- Author of an accepted IEEE conference paper titled "EfficientNetV2S with End Ensemble for Robust Bangla Handwritten Character Recognition".
- Awarded 1st Runner-up in a university-level Hardware and IoT Project Showcase.

Interest

Gen AI, Coding, Problem Solving, Traveling, Music
